Project "Energy related innovations" Dr. Martin Wörter

Varia

The survey has started in three countries, i.e. Austria, Germany, and Switzerland.

- The Austrian partners conduct an ad hoc survey among approximately 7000 enterprises. Participating firms can answer the questionnaire online or by mail. The Austrian partners still struggle for a satisfying response rate.
- In Germany the survey was organized as part of the comprehensive Community Innovation Survey. More than 4500 enterprises have been invited to participate in the additional online survey.
- In Switzerland the survey is based on the KOF Enterprise Panel, which consists of approximately 6000 enterprises and are regularly conducted for important issues of the Swiss economy, e.g. innovation activities, investment plans.
