

### Overview

Notes: all models include controls for additional drivers (e.g., capabilities, competition, demand, size, age, industry)

### Partners and Collaboration

### Energy Turnaround

Zentrum für Europäische  
Wirtschaftsforschung GmbH  
Centre for European  
Economic Research

- The exploitation of the existing energy-saving potential and the exploration for new energy-related technologies are **important**, since they help to reduce energy consumption and foster the use of environment-friendly energy-related technologies.
- **Specific survey** will allow us to answer a broad set of open questions in this area that are hardly possible to answer based on generally available data (e.g., the effect of different policy types).
- Comparable information simultaneously in **three different countries** for a representative number of firms.
